ARRAY ALGORITHMS in C++

(By Prince Agarwal)
[“HELLO WORLD”]

ARRAY ALGORITHMS IN C++

WHAT ARE ARRAY ALGORITHMS

- These Algorithms are only valid for Arrays
- all_of | any_of | none_of | copy_n | iota
- Let's Remember the Syntax of ternary Operator

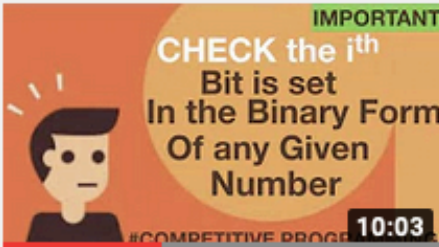

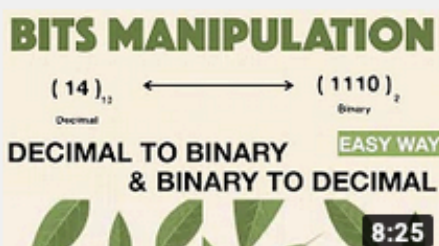

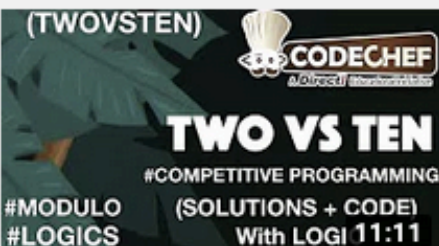

(Check **Condition**) ? (return something if condition **true**) : (return something if condition **False**)

For Example,

(3 > 2) ? (cout<< "3 is greater than 2") : (cout<< "3 is smaller than 2")

Hello world
