SORT in C++

(By **Prince** Agarwal)
[**“HELLO WORLD”**]

SORT IN C++

WHAT IS SORT

- Sorting is one of the most basic functions applied to data
- Basically It helps To Arrange data
- It works as `sort(startaddress , endaddress)`
- Sort internally uses **IntroSort**

It is implemented using hybrid of **QuickSort**, **HeapSort** and **InsertionSort**

By default, it uses **QuickSort**

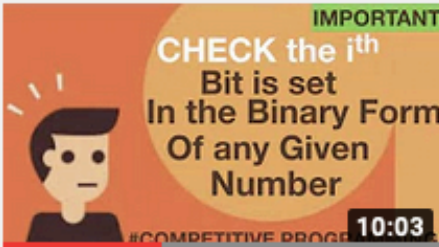

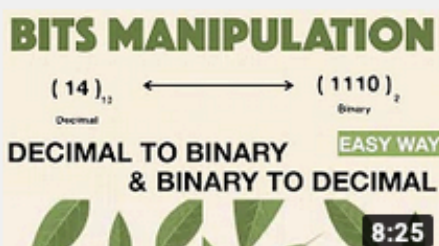

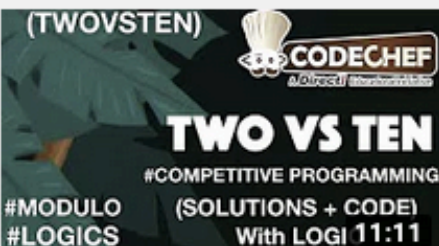

but if QuickSort is doing unfair partitioning
and taking more than $N \cdot \log N$ time

it switches to **HeapSort**

and when the array size becomes really small

it switches to **InsertionSort**

Hello world
